

## CARDIOLOGY MEDICAL CLIENT CARDIOLAB

A well-known cardiology medical client acquired this workstation technology and desired to redesign it to:

- Fit the look and feel of their existing products
- Improve user ergonomics
- Reduce production costs

MPE designed three scaleable versions of the workstation: a small cabinet to fit under a countertop; a compact model with more workspace and room for peripherals; and a larger version for multiple users. The workstations are built from a basic set of fabricated parts common to all three models.

This modular approach, along with MPE manufacturing efficiencies, helped drive down production costs significantly. The finished pieces reflect the client's branded look and feel, and give the user improved ergonomics and equipment access.
